If BPL were to become law, the FCC will have failed to provide the competetive level playing field as required by law.

The FCC is holding BPL competetors(Cable TV, Wireless and LEC) to a higher standards.

The cable companies have spent billions meeting FCC regulations to shield their cables so that they do not interfere with radio communications. BPL is an unshielded system without equivalent protection of the radio spectrum.

The FCC has recieved billions of dollars auctioning off spectrum. BPL will use and polute the spectrum without the financial burden commen to current license holders. BPL will severly limit the value of any future spectrum auctions that may be contemplated by the FCC.

DSL services offered by the Local Exchange Carriers are limited in the distance they can offer high speed internet by regulations that protect the radio spectrum by limiting the signal level they are allowed to use on their wires. BPL will polute the radio spectrum without equivalent protections.
